<sup>\*1</sup> The maximum power of PV module at STC shall NOT exceed the "Rated Input DC Power" of the power optimizer. PV modules with up to +5% power tolerance are allowed.

<sup>\*2</sup> Any power optimizer, which is connected to an operating inverterin a PV string, will be bypassed when it fails.

 $<sup>^{\</sup>star}$ 3 Once the power optimizer stops working, its output voltage is reduced to 0 V.

<sup>\*4</sup> It is for PV module frame/extruded aluminum profile racking system installation.

<sup>\*5</sup> When the operating temperature of the SUN2000-450W-P2/600W-P reaches 70 °C to 85 °C, it may shut down due to over-temperature protection and report an over-temperature alarm. After the temperature decreases, it can automatically resume working without causing any damage.

Disclaimer: The preceding values are measured by an internal laboratory of Huawei in a specific environment. The actual values may vary with products, software versions, usage conditions, and environmental factors.

<sup>\*1</sup> The max. input voltage is the upper limit of the DC voltage. Any higher input DC voltage would probably damage the inverter.
\*2 Any DC input voltage beyond the operating voltage range may result in inverter malfunction.
\*3 The SUN5000 Series Inverters must be fully equipped with optimizers, otherwise the system will report errors and can not work.
