^{*1} The maximum power of PV module at STC shall NOT exceed the "Rated Input DC Power" of the power optimizer. PV modules with up to +5% power tolerance are allowed.

Disclaimer: the preceding values are measured by an internal laboratory of Huawei in a specific environment. The actual values may vary with products, software versions, usage conditions, and environmental factors.

^{*2} Any power optimizer, which is connected to an operating inverter in a PV string, will be bypassed when it fails.

 $^{^{\}star}3$ Once the power optimizer stops working, its output voltage is reduced to 0 V.

 $^{^{\}star}4$ It is for PV module frame/extruded aluminum profile racking system installation.

^{*5} When the operating temperature of the SUN2000-450W-P2/600W-P reaches 70 °C to 85 °C, it may shut down due to over-temperature protection and report an over-temperature alarm. After the temperature decreases, it can automatically resume working without causing any damage.

^{*6} SUN2000-450W-P2/600W-P and MERC-1100/1300W-P can NOT be used in mixture under the same Smart Energy/PV Controller.
